GOAT ANTI-GUINEA PIG IgG (HORSERADISH PEROXIDASE CONJUGATED)

Catalog Number: PBT-103H

Size: 100 μ l
The vial is provided with a 10% overfill. Maximum recovery can be obtained by centrifuging the vial briefly to collect any solution on the cap and tube sides.

Dilutions: 1:1,000 - 1:10,000 for Protein Microarrays and Western blotting with chromogenic and enhanced chemiluminescent (ECL) substrates.

Form: Affinity purified IgG in 1X PBS, 50% glycerol and 1.0 mg/ml BSA.

Storage: Store at -20°C. This formulation is filter sterilized and contains no preservatives, including sodium azide, which substantially inhibits the enzymatic activity of horseradish peroxidase. Storage at -20°C will assist in retarding any microbial growth due to contamination.

Specificity: Cross-reactivity to serum proteins is minimal as determined by immunosorbent assays, but the antibody may cross-react with immunoglobulins from other species. Immunoelectrophoresis reveals that this antibody binds to guinea pig IgG heavy chain and to the light chains common to most guinea pig immunoglobulins.
