

PROTEIN BIOTECHNOLOGIES

PATHOLOGY REPORT

Catalog No. T7-040
Tissue: Colon
Location: Not recorded.
Diagnosis: Adenocarcinoma, well differentiated.
Stage: IIIA T₂N₁M₀
Grade: II
Sex: Female
Age: 74 years

Appearance:	<u>Macroscopic</u>	<u>Characteristics</u>	+/-
	Organ: Colon	Encapsulated:	-
	Size: 3 x 3 x 4 cm.	Invaded:	+
	Color: Red-dark.	Hemorrhagic:	+
	Consistency: Soft	Cystic degeneration:	-
	Cut surface: Non-identical	Calcification:	-

Histologic pattern:	<u>Cell distribution:</u>	+/-	<u>Structure / Pattern:</u>	+/-
	Diffuse:	-	Streaming:	-
	Mosaic:	-	Storiform:	-
	Necrosis:	+	Fibrosis:	+
	Lymphocytic infiltration:	+	Pallisading:	-
	Vascular invasion:	-	Cystic degeneration:	+
	Clusterized:	-	Bleeding:	-
	Alveolar formation:	-	Myxoid change:	-
	Indian file:	-	Psammoma body:	-

Cellular differentiation:	<u>Squamous:</u>	+/-	<u>Adenomatous:</u>	+/-	<u>Sarcomatous:</u>	+/-
	Squamoid:	-	Glandular cell:	+	Round cell:	-
	Spindle:	-	Cell stratification:	-	Spindle cell:	-
	Keratin:	-	Secretion:	-	Leiomyoblast:	-
	Desmosome:	-	Intracellular vacuole:	-	Small cell:	-
	Pearl:	-	Glandular formation:	+	Rhadomyoblast:	-

Nuclear atypia:	<u>Nuclear Appearance:</u>	0	I	II	III
	Anisonucleosis:			X	
	Hyperchromatism:			X	
	Nucleolar prominent:			X	
	Multinucleated giant cell:			X	
	Mitotic activity:			X	
	Nuclear grade:			X
